

Investment Objective

The Aspiriant Risk-Managed Equity Allocation Fund ("RMEAX" or the "Fund") seeks to achieve long-term capital appreciation while considering federal tax implications of investment decisions.

Description

- The Fund invests in a broad and diverse group of equity securities, such as common stock, preferred stock and depository receipts, of companies in countries within developed and emerging markets.
- Investments in a well-diversified portfolio of high quality and low volatility stocks, which tend to have lower risk, and may help the Fund protect capital, particularly during periods of market weakness.
- The Fund and certain sub-advisers will consider the tax implications of investment decisions and may apply tax management strategies to attempt to improve after-tax returns.

Fund Performance Comparison and Summary

As of 3/31/2017

RMEAX generated a net investment gain of 6.91% during the first quarter, performing in line with its benchmark, the MSCI ACWI Index, which also returned 6.91%. Equity market returns were positive across all major indices with emerging markets generating the highest returns, up 11.44%, as measured by the MSCI Emerging Markets Index, for the quarter.

During the quarter, Acadian Asset Management LLC ("Acadian") was added as a sub-adviser for the Fund's global low volatility holdings. Acadian complements our existing exposures held through Analytic Investors, LLC¹, the iShares Edge MSCI Min Vol Global ETF and iShares Edge MSCI Min Vol Emerging Markets ETF and further diversifies the Fund's low volatility returns. Together, these low volatility strategies will generally comprise 25% to 40% of the Fund's assets.

The Fund's allocation to quality stocks (high and stable returns on capital and low leverage), through the GMO Quality Fund and Aperio Group, LLC, outpaced our low volatility strategies for the quarter.

Finally, during the quarter, the Fund changed its name from the Aspiriant Risk-Managed Global Equity Fund to the Aspiriant Risk-Managed Equity Allocation Fund. The Fund will continue to invest in substantially the same manner as it has in the past and hold a globally diversified basket of lower risk / higher quality stocks. The name change simply provides us the ability to manage risk across geographies, styles and market capitalization with fewer restrictions imposed by the domicile of where a firm locates its corporate headquarters. Given the global footprint of many of the companies that the Fund owns, we believe traditional geographical breakdowns based on country domicile do not accurately reflect the underlying economic exposures of these multinational businesses.

Investment Strategies

Beta Equities are investments in a portfolio of securities that broadly mirrors the underlying holdings of an equity benchmark and closely replicates the risk and return characteristics of the benchmark. Beta Equities exposure can be gained through passively managed mutual funds and exchange-traded funds (ETFs), as well as separately managed accounts.

Defensive Equities are investments in a portfolio of securities that has a similar return profile of an equity benchmark but with lower volatility or risk. Defensive Equities tend to be characterized as (residual interests in) companies with stable profitability, leading market shares, high returns on capital, and low leverage. Defensive Equities exposure can be gained through actively managed mutual funds and separately managed accounts, as well as factor-based passively managed ETFs.

Risk Management

Country Exposures. Defensive Equities managers can adjust portfolio weightings to or away from markets or countries with forward return expectations significantly different from the All Country World Index (ACWI). By applying a macro or top-down overlay on the investment landscape, managers can focus their industry and security selection process on the markets with the most favorable opportunities.

Industry and Security Selection. Using quantitative techniques and/or fundamental analysis, Defensive Equities managers dynamically screen companies using a variety of factors to rank industries and companies with the most desirable characteristics to construct and rebalance a portfolio. Managers may, from time to time, also utilize certain tax management strategies to improve after-tax returns.

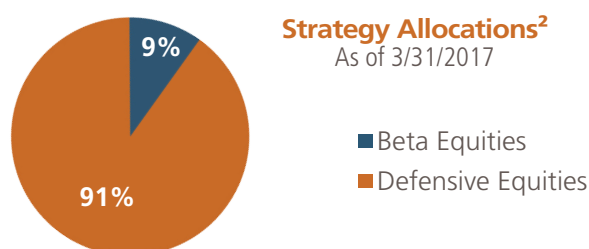

Overall Portfolio risk management is also undertaken at the Fund level as the opportunity set for equity markets changes. As the outlook for equity returns improves, we expect to increase the Fund allocation to low-cost Beta Equities strategies to most efficiently capture upside market movements. Conversely, we anticipate holding a larger weight to Defensive Equities when the return outlook for equities deteriorates in order to soften any downside volatility.

FUND FACT SHEET & PERFORMANCE REVIEW

	Q1	YTD	1 Year	Annualized		
				2 Years	3 Years	Since Inception*
RMEAX	6.91%	6.91%	10.42%	4.18%	3.56%	5.68%

FUND FACT SHEET & PERFORMANCE REVIEW

An investment in the Fund is subject to risks, and you could lose money on your investment in the Fund. The principal risks of investing in the Fund include, but are not limited to, investing in smaller companies with limited resources and the use of predictive models. A value oriented investing style may go in and out of favor which may cause the Fund to sometimes underperform other equity funds. Portfolio composition will change, the sub-adviser(s) due to ongoing management of the Fund. References to specific securities or sectors should not be construed as recommendations by the Fund, its adviser, the sub-adviser(s) or distributor.

Foreign securities have additional risks including currency rate changes, political and economic instability, less regulation and market liquidity. Investments in emerging markets involve even greater risks.

The Fund may invest in derivatives which can be highly volatile, illiquid, difficult to value, and changes in the value of a derivative may not correlate with the underlying securities or other securities held directly by the Fund. Such risks include losses which, as a result of leverage, can be substantially greater than the derivatives' original cost. There is also a possibility that derivatives may not perform as intended, which can reduce opportunity for gain or result in losses by offsetting positive returns in other securities the Fund owns.

The adviser and sub-adviser(s) may be unable to construct the Fund's investment portfolio such that the intended federal tax implications, when making investment decisions with respect to individual securities, are achieved.

The below referenced indices do not reflect the deduction of fees and taxes associated with a mutual fund, such as investment management and fund accounting fees. Investors cannot invest directly in an index, although they can invest in their underlying securities.

The MSCI ACWI Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. For purposes of the Fund, emerging markets and developed markets are considered emerging or developed based upon the definition of the market in the MSCI ACWI Index.

The MSCI Emerging Markets Index captures large and mid cap representation across 23 emerging markets countries. With 830 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

¹ Analytic Investors, LLC is a wholly-owned subsidiary of Wells Capital Management, Inc.

² Weights are based off the Fund's total investments, excluding cash and cash equivalents.

³ The Fund may invest in shares of other investment companies including other mutual funds. Acquired fund fees & expenses are incurred as a result of investing in other mutual funds.

⁴ The SEC 30-Day Yield is computed under SEC standardized formula and is based on the most recent trailing 30-day period. The Fund's actual distribution rate will differ from the SEC yield, and any income distributions from the Fund may be higher or lower than the SEC yield calculations. Unsubsidized yields do not reflect fee waivers in effect.

Distribution Rate on NAV is the latest declared annual distribution per share, divided by NAV per share, as of 12/31/2016. Distributions may be paid from sources other than ordinary income, such as short-term capital gains, long-term capital gains or return of capital.

⁵ Excludes cash and cash equivalents.

⁶ As of 2/1/2017. The adviser has contractually agreed to waive certain fees/expenses so they do not exceed 2.25% for Advisor Shares. The adviser may recoup previously waived expenses that it assumed for up to two years from the end of the fiscal year in which the expenses were incurred. Effective 2/1/2017, the adviser has also contractually agreed to waive its advisory fee from 0.24% to 0.16% through June 30, 2018.
