An investment in the Fund is subject to risks, and you could lose money on your investment in the Fund. The Fund is exposed to the same risks that are associated with investing in underlying municipal securities owned by the Fund. The actual cost of investing in underlying funds may be higher than a direct investment in such securities because the Fund will bear its pro rata portion of the expenses of the underlying funds in addition to its own direct expenses. The Fund is subject to interest rate risk; as interest rates rise, bond prices generally fall. Credit risk arises from an issuer's ability to make interest and principal payments when due, as well as the prices of bonds declining when an issuer's credit quality is expected to deteriorate. Investments in below investment grade or high yield securities are subject to liquidity risk and heightened credit risk. Investments in securities of non-U.S. issuers or U.S. issuers with significant non-U.S. operations may present more risk. The Fund may invest in illiquid securities, which may or may not be sold or disposed of in the ordinary course of business.

The use of derivatives involves substantial financial risks and transaction costs. Certain derivatives may be illiquid. The Fund's use of inverse floaters may magnify the potential for losses. The Fund periodically engages in portfolio leverage and when doing so, assumes a higher level of risk in pursuit of its objectives. Leverage involves the risk that the Fund could lose more than its original investment and also increases the Fund's exposure to volatility, interest rate risk and credit risk.

These and other risk considerations, such as preferred securities, call, counterparty, extension, defaulted securities, income, municipal lease obligations, political and economic, prepayment, restricted securities, tax, zero coupon bond risks, and, as a result of investing in underlying funds, short sale risk, are described in detail in the Fund's prospectus.
